SETUP INSTRUCTIONS

These instructions are for Twilight Imperium IV for Table Top Simulator by Raptor1210 and team.

To enable this mod, you must first search for the Twilight Imperium IV mod on Steam workshop and subscribe to it or click this link: Twilight Imperium IV

TABLE

Select the desired number of players and other features on the "TI4 Setup" tile, then click "Setup" to reset the table and player zones appropriately.

The table shuffles relevant bags and decks when first loaded, and after setup adds new cards to a deck (or tiles to a map tiles bag).

DETERMINE COLORS

Using the Color Token bag located near the Strategy cards, assign a color to each player by drawing a token randomly and click in the associated seats.

Alternatively, you can type the !seats command to shuffle the seat of each player currently sitting.

FACTIONS

Use the "Faction Selector" in each play area to get more details about each faction. Commit to a faction by clicking "Unpack" to unpack the faction, home system, starting technologies and starting units, plus any faction-specific tokens. It may print additional setup instructions when applicable (such as Winnu's "pick one technology" setup).

MAP

If building the map, find map tiles in the "Blue Planet Tiles" and "Red Anomaly Tiles" bags near the strategy cards.

If using the map builder to load a premade map, enter the map string and click "build" (check the "Maps with Strings" bag for a collection of premade maps).

Once the map is built, optionally click "Place Cards" on the map tool to place exhausted planet cards on each planet. Otherwise find planet cards in the planets deck.

OPTIONAL SETUP

The "Player Color Switcher" in the tools bag lets players change colors.

The "Build Area" in the tools bag displays unit costs and resources for units, planets, and trade goods inside it (drag the lower right corner to resize). Click the play button to announce the build, right click for menu options to warp contained units to the active or home system. There is only one, copy/paste to players as desired.

Enable "Faction Borders" near the strategy cards mat to draw faction borders during the game. Place owner tokens on empty planets to claim them.

For games where everyone at the table is promoted the host can click the "toggle promoted" button in the tools bag, after which any player clicking it toggles their promoted status.

FINALIZE SETUP

Choose a speaker, secret objective for each player, and flip the first two public objectives.

See the "Reference Items" bag for additional in-game resources, and remember that most objects have detailed tooltips that appear when hovering a pointer over an object for a moment.

STRATEGY PHASE

Starting with the speaker players choose strategy cards, placing them in each player's area. When finished, click "Place Trade Goods and Set Turns" to place a trade good on each unpicked strategy card and set TTS player order according to strategy card initiative value (or the Naalu token, if present in a player area).

ACTION PHASE

Activate systems by dropping a command token on the system tile, or as a convenience right-click a system tile for a menu item to activate it (also moves a command token from the clicking player's tactics pool). Similarly a "Diplomacy Planet" menu item moves command tokens from not-the-clicking-players' command tokens bags to the system, as well as other options for strategy tokens or reinforcements (Construction secondary, retreat).

To draw action cards, hover over the action cards deck and press the number of cards to draw. (Using the number keys at the top of the keyboard -- numpad keys are special.)

Click "Play" on a strategy card to display a pop-up window to all players with options. Clicking those informs the table of each choice, but players still need to execute the action (such as drawing cards or fetching command tokens).

When playing Politics, right-click menu options on the agenda cards will place them on top or bottom of the agenda deck.

When a player passes, they may flip the Active/Passed token in their area to skip future turns automatically. If using them, the tokens will reset and report once all players have passed.

COMBAT

The "MultiRoller" below each player area helps make combat rolls, applying relevant unit upgrades and action cards face up on the table in that player's area.

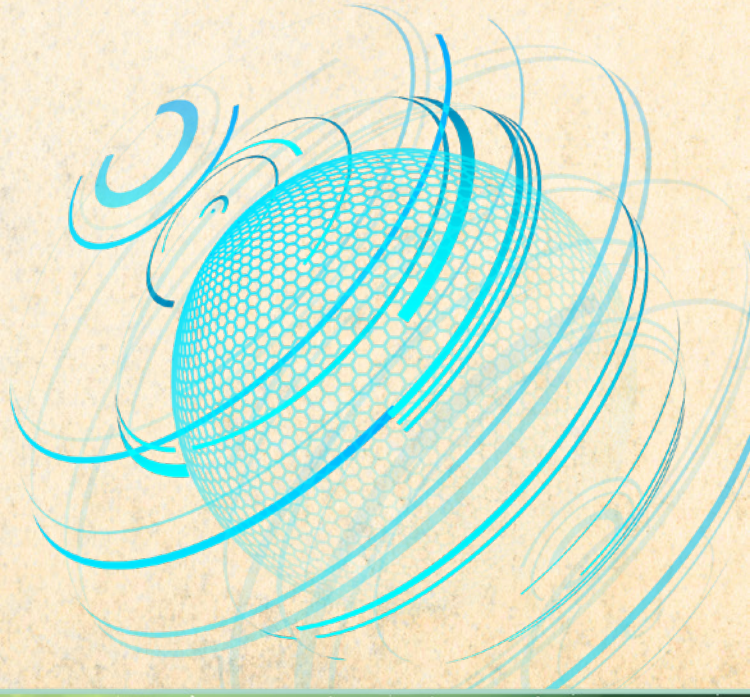
"Reset" puts it in an empty state, left and right click to change the number of units of each type. Click the "vs color" button to specify your opponent (to check for Antimas Deflectors, etc), and "PS" for plasma scoring. If new action cards are played, click "Update" to recalculate unit modifiers. (The MultiRoller will update modifiers when you roll as well, updating early just displays the dice counts and hit values based on current state.)

Click the combat type on any unit to roll for all units.

As a convenience, the "Auto-fill MultiRoller" tool (located near the strategy cards) can fill in and roll the MultiRoller for the clicking player, counting units in the active system (or adjacent for PDS2) and automatically enabling AFB if the opponent has it. For bombardment and ground combat, units are assigned to the closest planet. Bombardment applies plasma scoring to only the first planet bombarded. (Right clicking will only fill the MultiRoller without rolling it.)

Enormous fleets may use the optional "Auto-fill MultiRoller Arena" tile in the tools bag. It acts like an oversize version of the active system, resetting its image when a system is activated. Clicking "warp in" or "warp out" moves units between the actual system tile and the arena tile.

The purple "Graveyard" bags will return any discarded items to their correct locations (units, action cards, etc.)



STATUS PHASE

Handle scoring and revealing the next objective. For scoring, players may right-click the objective for a menu item to score it, announcing who scored it and placing an owner token on it (this does not move the player's token on the score track).

(The "Secrets" mat next to the scoreboard provides a convenient location for scored secret objectives, as well as extra slots for Support for the Throne cards.)

Click "Deal Action Cards" on the strategy card mat to deal action cards to players in initiative order. If the action deck would exhaust and a player needs to discard prior to shuffling, players may manage the dealing themselves (skipping the button click).

Click "Return Strategy Cards and End Status Phase" to do that, as well as recalling command tokens from the map, allocating new command tokens, readying cards, and repairing units. (If the "Political Stability" action card is face up in a player's area, that player keeps their strategy cards.)

Action card dealing and command token allocation apply faction abilities and laws affecting the counts (for laws, place one of the player's owner tokens on the law to connect them).

AGENDA PHASE

Find vote counters and when/after tokens on or around the agenda phase mat.

Players may flip the "when" and "after" tokens to signal not playing any further whens/afters.

Vote counters start with the total influence value of all planets in each player area. Optionally click "Update Votes" to reset vote counters to only unexhausted planets.

When a new agenda is revealed, click "Reset" to reset when/after tokens.

Finish by clicking "Ready Planets" to flip any exhausted planet cards.

(The "Agendas/Laws" mat next to the scoreboard provides a convenient location for active laws.)

PROPHECY OF KINGS EXPANSION

Explore planets by either drawing a card and finding any related attach tokens in the "Exploration Bag", or right click a system (or frontier token) and click "Explore <Planet Name>" to draw the card and any attach token. Attach tokens lock to the planet dropped on, also adding their image to the planet card as a reminder.

Unlike action cards that are only in the play area when used, leaders are always in the play area. When a leader has an optional ability, it will have an "active/idle" toggle button. Abilities are only used when active.

Alliance promissory notes automatically copy the commander ability, players may also choose to make a copy of the commander card.

GENERAL TABLETOP SIMULATOR HOTKEYS

CAMERA CONTROLS

- **PANNING**: The "WASD" keys can be used to pan the camera around the screen
- **ZOOM ON OBJECT**: Press and hold "ALT" while hovering over an object bring a zoomed view of the object up on your screen. Pressing and holding "ALT+SHIFT" will show you the back of the card.
- **MAGNIFYING GLASS**: Press and hold "M" to magnify the area of the table under your cursor.
- **BEHAVING STRANGE?**: Press "P" until the "Third Person Camera" text appears, and you should be fixed!

COMPONENTS

- **ROTATING**: Press or Hold "Q" or "E" to rotate the object under your cursor.
- **FLIP**: Press "F" to flip the object under your cursor.
- **SHUFFLE/RANDOMIZE**: Press "R" to shuffle a deck or bag of objects, or to randomize a die.
- **SELECT MULTIPLE**: Click and drag a box around objects to select multiple. Or, hold one item with left-click and right-click other items to add them to your bundle.
- **LOCKING OBJECTS**: Press "L" over an object to lock it in place. Useful for the build area, technology/planet boards, space docks and PDS, and other things you don't want to move.
- **GROUPING**: Press "G" while holding multiple objects of the same type to make a deck out of the cards. Use sparingly, as decks are not always detected by scripting.
- **DRAWING**: Press a key on the Number Row (above QWERTY) to draw that many items from a bag or deck into your hand.
- **ORGANIZING OBJECTS**: While holding a group of objects, you can press a key on the Number Row to organize those objects into neat rows. Useful for Planet Cards and fanning out tokens (Trade Goods/Fighters/Infantry) for counting.

RIGHT CLICK MENUS & TABLE FEATURES

SYSTEM TILES

- **DIPLOMACY SYSTEM**: Moves command tokens from all non-clicking players reinforcements to the system.
- **ACTIVATE SYSTEM**: Moves a command token from tactics to system.
- **STRATEGY TOKEN**: Moves a strategy token to system (construction).
- **REINFORCEMENT TOKEN**: Moves a reinforcements command token (retreat/signal jamming).
- **OWNER TOKEN**: Moves an owner token to the system.
- **GRAVITY RIFT**: Roll for rift survival.

PROPHECY OF KINGS

- **EXPLORE [PLANET]**: On a System Tile: this draws an exploration card to the system applies attachments to the system/card if needed.
- **EXPLORE FRONTIER**: On a Frontier Token: this draws an exploration card from the frontier deck to the system and applies any relevant cards
- **PURGE**: On a Relic, Hero, or Exploration Card: this discards the card to the Purge bag of the appropriate type, instead of the discard pile to be reshuffled.

TABLE AREA

- **TI STATS**: Reports various player stats in the lower right.

OBJECTIVE CARDS / AREA

- **SCORE**: Announces scoring and places an owner token on it (does not move owner token marking current score).
- **DEAL OBJECTIVES**: Places objective cards on each of the empty slots (used during game setup only).

BUILD AREA TOOL

- **WARP UNITS TO THE ACTIVE SYSTEM**: Warps all units and tokens from the build area to the currently active system.
- **WARP UNITS TO HOME SYSTEM**: Warps all units and tokens from the build area to your home system (construction).
- **TRASH TRADE GOODS IN AREA**: Places all trade goods in the build area into the graveyard.
- **PHIL MODE**: Adds a production value field and draws "parking spaces" for units (ideal for teaching games).

AGENDA CARDS

- **PLACE AGENDA ON TOP**: Places Agenda card on the top of the Agenda deck.
- **PLACE AGENDA ON BOTTOM**: Places Agenda card on the bottom of the deck.

TOKEN SWAPPING

- **INFANTRY / FIGHTERS**: Press R while hovering over an Infantry or Fighter plastic you own to replace it with a 1x Token from the bag.
- **3X TOKENS**: While you have 3 or more infantry, trade goods, or fighters (combination of Tokens/Plastic) selected, you can press R to swap them with a 3x Token. Alternatively, you can press R while hovering over a 3x Token to split it into 1x Tokens.

CHAT COMMANDS

- **!HELP**: prints a summary of chat commands and hotkeys.
- **!SEATS**: shuffles players between seats.
- **!COLOR**: sends an announced whisper to color, a spectator in the teal seat can see them too.
- **!TEALME**: changes player color to teal (observer only). The teal seat has no hand so cannot be dealt cards by "deal to all", but may interact with the table.

NUMPAD KEYS

1	:	Place one tradegood at pointer location.
2	:	Place one fighter token at pointer location.
3	:	Place one infantry token at pointer location.
4	:	Move camera to the player's combat roller.
5	:	Move camera to active system.
6	:	Move camera to map area.
7	:	Move camera to score area.
8	:	Move camera to votes area.
9	:	Move camera to player area.
0	:	Put held objects into a graveyard bag.

MOVING MATS / AREAS

Almost all objects are relative to a mat, can unlock and move mats as needed. (Including the unit stand, you can unlock and move it -- unit bags are joined to the stand.)

MAP BUILDERS

Right-click map tool "Add clone" menu option to add a new right-click menu item to system tiles to clone them -- this is different from the TTS "clone" menu option, you want the one at the top (clones support activation, report the expected tile number when saving a map, etc). Map tool supports repeats of tile number, cloning the tile. Map string can have a "{#}" at the start (need curly braces, replace number with actual tile number) to swap Mecatol Rex for a different system.

STREAMER GOODIES

The "Faction Borders" tool has settings on the reverse side. If any or all players do not want borders, one can select the set of players who can see them.

"TI4 Spreadsheet Update" in the tools bag can fill in score and technology spreadsheets (cloning the given Google Sheets and creating an "anyone can edit" share URL). Note that round detection counts the number of face up objectives -- should the "Incentive Program" agenda come up revealing an extra objective, leave it face up on the table to signal the extra agenda should not count toward round).

"TI4 Command Token Counts" in the tools bag displays a large-text summary of command tokens in a player area.

As mentioned earlier, "!tealme" puts a player in the teal seat. Teal has no hand so will not be dealt cards during "deal to all", may interact with the table, and can see and "!color" whisper text.

THANKS

This mod is made of contributions from many people.

Thanks to 3tamatulg, Alister, Billy, Blarknob, Brandondash, Cruix, Cyrusa, Darrell, Darth Batman, Doot, Garnet Bear, Goatboy, Hooliganj, Jabberwocky, Jatta Pake, Jefferson, Jirach08, Legoman, Lily, Loving Teammate, Mage, Mantis, Max Philippa, Milty, Nicest_guy_22, Plat251, Positive, Psicoma, Raptor1210, Rodney, Saunick, SCPT Hunter, SCPT Matt, Snorecerer, Steve "Vorpal Dice Press", Tactic Blue, ThatRobHuman, Toppopia, Volverbot, Wekker, West, x3n d0g, and the entire TI4 community for their contributions.

A massive shout out to Fantasy Flight Games for creating an awesome game. If you have the opportunity please support them. The board game industry wouldn't be the same without them and if you enjoy their work please, please support them and your local game stores.
